Sketch uses 218244 bytes (10%) of progra  
Global variables use 81224 bytes (2%) of  
INFO: Goto open COM5
```

- 按著SW1 Reset 鍵，當看到訊息“INFO: Goto open COM X”的時候，再放開SW1 鍵。.....開始上傳，直到看到訊息“Finished!”。
- 再按一次SW1 鍵(Reset)，重啟系統。

- 當系統運行後：

- 開啟監控視窗(Serial Monitor)
- 按一按板子上的SW2 或SW3 鈕，結果以0，1表示按鈕狀態。

DHT11 溫度與溼度感測器

- **DHT11是一個結合濕度計和測溫元件量測週遭空氣環境。使用上很簡單，但是抓取資料時必須要特別注意時間的掌控，而且每筆資料的抓取時間間隔要 2 秒鐘以上，不能太快。**
- **DHT11 的規格如下：**
 - ◆ 濕度測量範圍：20~90%;
 - ◆ 濕度測量精度：±5%;
 - ◆ 溫度測量範圍：0~50℃
 - ◆ 溫度測量精度：±2℃
 - ◆ 電源供應範圍：3~5V
 - ◆ 頻率不可超過：0.5Hz (每2秒一次)

安裝SimpleDHT Library

- 開啟IDE的“開發板管理員”(Sketch > Include Library > Manage Libraries)
- 安裝SimpleDHT Library

- 監測溫濕度時，板子上內建的RGB會亮起。
- 每五秒監測一次。

ThingSpeak

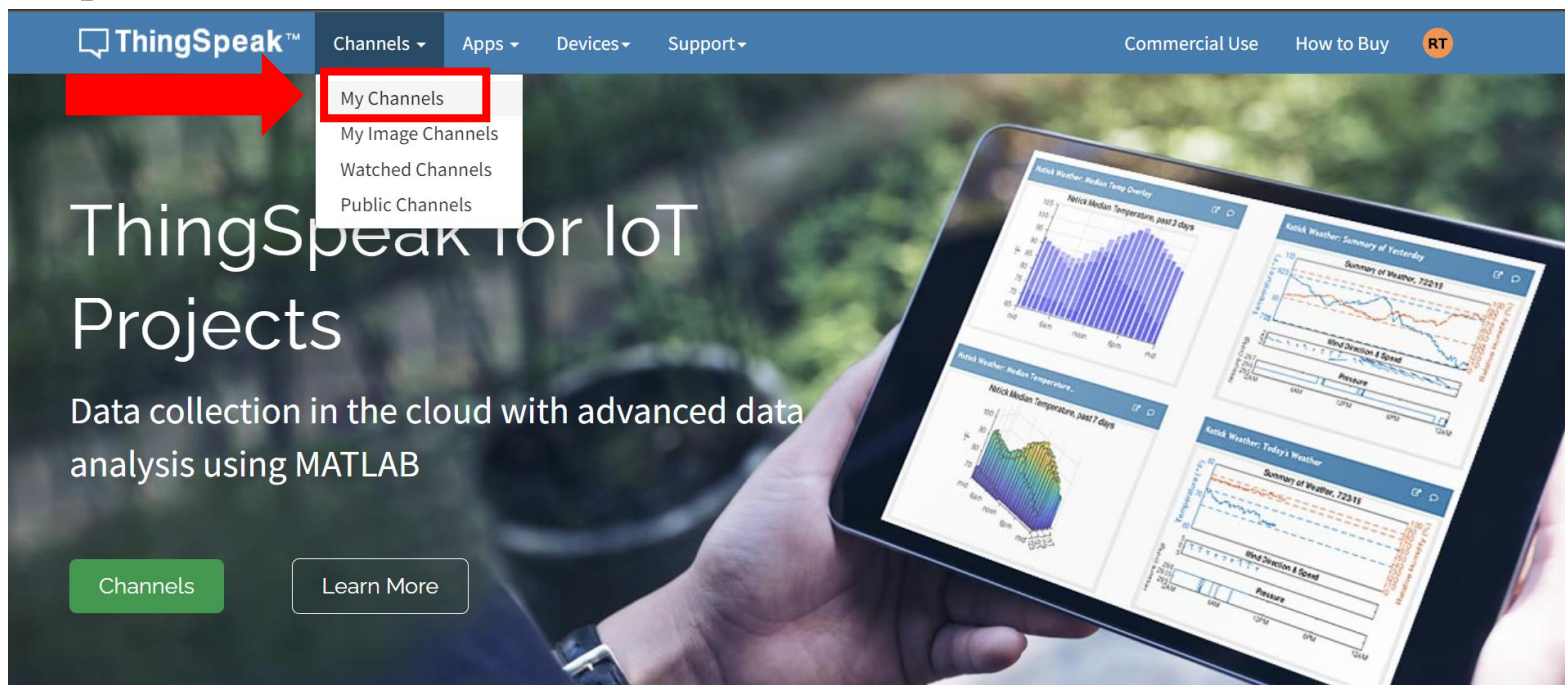

- ThingSpeak 是一種物聯網分析平台服務，提供雲端整合、數據視覺化和分析實時數據流。
- ThingSpeak 可將感測設備的數據即時視覺化。
- ThingSpeak 提供REST API 和MQTT API 兩種方式：
 - ◆ 本範例以REST為主。
- 本範例HTTP POST方式連線ThingSpeak 網站，建立連線 `httpClient_connect`，如下

```
Serial.println("\nStarting connection to server...");  
char server[] = "https://api.thingspeak.com/update";  
httpClient_connect(&iotClient, server);  
Serial.println("\nOK!");
```

Help 輸入名稱

Each ThingSpeak application collects. Each channel includes eight fields that can hold any type of data, plus three fields for location data and one for status data. Once you collect data in a channel, you can use ThingSpeak apps to analyze and visualize it.

Channel Settings

- Percentage complete:** Calculated based on data entered into the various fields of a channel. Enter the name, description, location, URL, video, and tags to complete your channel.
- Channel Name:** Enter a unique name for the ThingSpeak channel.
- Description:** Enter a description of the ThingSpeak channel.
- Field#:** Check the box to enable the field, and enter a field name. Each ThingSpeak channel can have up to 8 fields.
- Metadata:** Enter information about channel data, including JSON, XML, or CSV data.
- Tags:** Enter keywords that identify the channel. Separate tags with commas.
- Link to External Site:** If you have a website that contains information about your ThingSpeak channel, specify the URL.
- Show Channel Location:**
 - Latitude:** Specify the latitude position in decimal degrees. For example, the latitude of the city of London is 51.5072.
 - Longitude:** Specify the longitude position in decimal degrees. For example, the longitude of the city of London is -0.1275.
 - Elevation:** Specify the elevation position meters. For example, the elevation of the city of London is 35.052.

Help

API keys enable you to write data to a channel or read data from a private channel. API keys are auto-generated when you create a new channel.

API Keys Settings

- Write API Key:** Use this key to write data to a channel. If you feel your key has been compromised, click **Generate New Write API Key**.
- Read API Keys:** Use this key to allow other people to view your private channel feeds and charts. Click **Generate New Read API Key** to generate an additional read key for the channel.
- Note:** Use this field to enter information about channel read keys. For example, add notes to keep track of users with access to your channel.
